

SIMANFOR

Model for *Pinus halepensis* Aragón (Spain)

Model

Phalepensis Aragón

Individual tree growth model for *Pinus halepensis* in Aragón (Spain)

Model description

- Species: *Pinus halepensis* Mill.
- Species SFNI (Spanish Forest National Inventory) code: 24
- Geographical area: Aragón
- Geographical area (administrative): Zaragoza, Huesca and Teruel

Model requirements and recommended use

- Initial inventory requirements: age and dominant height of the plot; expan and dbh of the trees. Slope of the plot is needed in order to calculate mushrooms variables
- Geographical area: Aragón, closer places and another places with similar characteristics (assuming differences)
- Stand type: monospecific stands
- Execution recommended time: 10 years executions (growth equation developed by using that criteria)
- Site Index is defined as top height at a base age of 60

Model components:

- **Site Index equation:**
Saldaña AMC (2010). Bases para la gestión de masas naturales de *Pinus halepensis* Mill. en el Valle del Ebro (Doctoral dissertation, Universidad Politécnica de Madrid)
Rojo A, Saldaña, AM, Barrio-Anta M, Notivol-Paíno E, Gorgoso-Varela JJ (2017). Site index curves for natural Aleppo pine forests in the central Ebro valley (Spain)
- **Survival equation:**
Equation obtained from PHRAGON_2017_v1.cs, a model of *Pinus halepensis* useful for the old SiManFor version, developed for Aragón by Föra Forest Technologies and Diputación General de Aragón
- **Diameter growth equation:**
Equation obtained from PHRAGON_2017_v1.cs, a model of *Pinus halepensis* useful for the old SiManFor version, developed for Aragón by Föra Forest Technologies and Diputación General de Aragón
- **Ingrowth equation:**
Trasobares A, Tomé M, Miina J (2004). Growth and yield model for *Pinus halepensis* Mill. in Catalonia, north-east Spain. Forest ecology and management, 203(1-3), 49-62
- **Ingrowth distribution:**
By default
- **General calculations: bal, g, slenderness, normal circumference:**
Standard equations
- **Generalized height-diameter equation:**
Equation obtained from PHRAGON_2017_v1.cs, a model of *Pinus halepensis* useful for the old SiManFor version, developed for Aragón by Föra Forest Technologies and Diputación General de Aragón
- **Crown equations:**
Equation obtained from PHRAGON_2017_v1.cs, a model of *Pinus halepensis* useful for the old SiManFor version, developed for Aragón by Föra Forest Technologies and Diputación General de Aragón
- **Taper equations over bark (volume):**
Equation obtained from PHRAGON_2017_v1.cs, a model of *Pinus halepensis* useful for the old SiManFor version, developed for Aragón by Föra Forest Technologies and Diputación General de Aragón
- **Biomass equations:**
Ruiz-Peinado R, del Río M, Montero G (2011). New models for estimating the carbon sink capacity of Spanish softwood species. Forest Systems, 20(1), 176-188
- **Technological wood uses information:**
Rodríguez F (2009). Cuantificación de productos forestales en la planificación forestal: Análisis de casos con cubiFOR. In Congresos Forestales
- **Value for Reineke Index equation:**
Aguirre A, Condés S, del Río M (2017) Variación de las líneas de máxima densidad de las principales especies de pino a lo largo del gradiente estacional de la Península Ibérica. 7 Congreso Forestal Español
