

Model for *Pinus pinaster mesogeensis* Sistema Ibérico Meridional (Spain)

Model

IBEROPT calibrated

IBEROPT: individual tree growth model for *Pinus pinaster meso-geensis* in Sistema Ibérico Meridional (Spain) - calibrated parameterisation using the Spanish National Forest Inventory

Model description

- Species: Pinus pinaster Ait. subsp. mesogeensis
- Species SFNI (Spanish Forest National Inventory) code: 26
- Geographical area: Sistema Ibérico Meridional
- Geographical area (administrative): Soria, Guadalajara, Cuenca y Teruel

Model requirements and recommended use

- Initial inventory requirements: age, dominant height and basal area of the plot; expan and dbh of the trees
- Geographical area: Sistema Ibérico Meridional, closer places and another places with similar characteristics (assuming differences)
- Stand type: monospecific stands, resinated or not
- Execution recommended time: 5 years executions (survival, growth and ingrowth equations developed by using that criteria)
- Site Index is defined as top height at a base age of 80 years
